

Protein Power Plus

“An easy way to help ensure balanced nutrition in a great tasting shake.”

Sunny the Sun

Whether you're grabbing breakfast before school or choosing a nutritious snack after practice, Pure Kidz Protein Power Plus is an easy and effective way to help ensure complete and balanced nutrition in a great tasting shake.

Protein Power Plus is a proprietary protein blend supplying the nutrients needed for optimal health. Since the body can't manufacture its own nutrients, they must be obtained through foods or nutritional supplements. Pure Kidz Protein Power Plus contains several nutrients including complete proteins, complex carbohydrates, antioxidants, fruits, vegetables, whole grains, enzymes, vitamins and minerals.

Nutrition for kids can in some ways be compared to nutrition for adults. Regardless of age, the body needs nutrients for optimal health. On the other hand, children have periods of rapid growth and development; making their nutritional needs much different than adults. In addition, children generally have fewer nutrient stores to draw from, making proper nutritional intake essential for a healthy and active child.

Protein Power Plus may benefit a child's health in many ways. These benefits may include heart health, supporting the immune system, maintaining healthy vision, healthy connective tissue, and helping support growth and development. Pure Kidz Protein Power Plus contains the following:

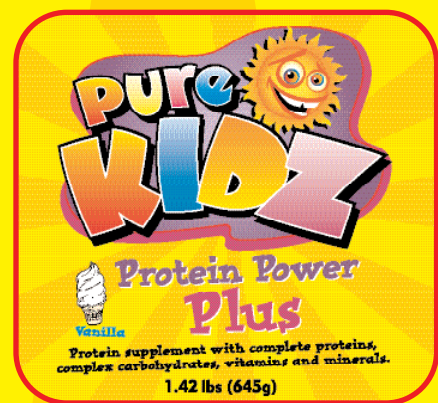

Carbohydrates are the body's main source of energy or calories.

Protein supplies energy and amino acids. Amino acids are building blocks that build, repair, and maintain every cell in your body.

Fats also supply energy but they have many other functions. Fats transport nutrients and they are a part of many body cells.

Vitamins trigger many different body processes. These compounds are needed in very small amounts in the diet to regulate chemical reactions in the body. Each vitamin has a specific job in your body, so one vitamin can't replace another. Vitamins do not provide energy but they help our bodies use the energy from foods.

Minerals are like vitamins and are used in the body to promote chemical reactions and form body structures.
